EXPERIENCE

Software Engineering Co-op

May 2026 – Aug 2026

SPS Commerce

Brampton, ON

- Implemented the entire feature lifecycle for a multi-pipeline deployment assistant **Slack app** integrating **Jira** and **Azure DevOps** taking the project from the planning phase through to **demoing it for stakeholders**.
- Refactored to standardize caching of auth credentials platform-wide to use **Redis** and **encryption by default**.
- Cut support time by 80%** through a support agent built on **AWS Bedrock**, **LangChain**, and a custom **context management solution**.
- Extended the **support agent** with custom **MCP Tools** enhancing data access for customers and developers.
- Created a **reusable library** for 11 existing and future services by **refactoring a mono-repo** into distinct modules.

President, Owner, & Lead Developer

2025 – Present

Montgomery Software Foundry Inc.

Barrie, ON

- Founded a company to sell a **custom SaaS solution** to a wheelchair accessible transit company in the GTA.
- Updated a paper and Excel-based system to an online workflow using **Postgres** that **prevents data loss**.
- Developed products to **customer specifications** through regular discussion about their business use case.
- Developing a **multi-agent** system using **RAG** for a schools to provide control and visibility into student learning.
- Secured client data** by constructing the system in compliance with **OWASP Top 10**.

PROJECTS

Timber | *React Native, Expo, Firebase, Typescript*

2026 – Present

- Currently submitting my mobile-first workout app to the **Apple App Store** and the **Google Play Store**.
- Architected my app around the **minimizing user interaction**, having workouts **auto-fill dynamically**.
- Made user data portable and consent-gated: **data export** on demand, with AI and social **features being exclusively opt-in**.

Moneyball | *Kotlin, Spring Boot, Jupyter Notebook, React*

2026 – Present

- Simplified complex analytics from the official MLB and Statcast APIs to **describe behaviours** in plain English instead of overwhelming users with **KPIs**.
- Originally built as a **Jupyter Notebook** then expanded into a **self-hosted Spring Boot** service.
- Processed **.csv files with 120+ fields with 500+ records** to evaluate baseball games at a pitch-by-pitch level.
- Set up a daily **scheduled task** to collect season data, aggregating player and team overviews for expected leader boards and standings.
