Experience

Software Engineering Co-op May 2026 – Aug 2026
SPS Commerce *Brampton, ON*

- Implemented the entire feature lifecycle for a multi-pipeline deployment assistant **Slack app** integrating **Jira** and **Azure DevOps**, from the planning phase through completion, then defined a **roadmap for future iterations**.
- Refactored to standardize caching of auth credentials platform-wide to use **Redis** and **encryption by default**.
- **Cut support time by 60%** through a support agent built on **AWS Bedrock**, **LangChain**, and a custom **context management solution**.
- Extended the **support agent** with custom **MCP Tools**, enhancing data access for customers and developers.
- Created a reusable library for 11 existing and future services by **refactoring** a mono-repo into distinct **modules**.

President, Owner, & Lead Developer 2025 – Present
Montgomery Software Foundry Inc. *Barrie, ON*

- Founded a company to sell a **custom SaaS solution** to a wheelchair accessible transit company in the GTA.
- Updated a paper and Excel-based system to an online workflow using **Postgres** that **prevents data loss**.
- Developed products to **customer specifications** through regular discussion about their business use case.
- Developing a **multi-agent** system using **RAG** for a schools to provide control and visibility into student learning.
- **Secured client data** by constructing company systems in compliance with **OWASP Top 10**.

Projects

Timber | App Store | Play Store | *React Native, Expo, Firebase, Typescript* 2026 – Present

- Created a mobile-first workout app published to the **iOS** and the **Android** app stores.
- Architected my app around **minimizing user interaction**, having workouts **auto-fill dynamically**.
- Made data portable and consent-gated: users have **data export** on demand, with AI and social **features being exclusively opt-in**.
- Designed advanced analytics and a detailed exercise catalog using **LLMs** and **decision models** to show user progress **heatmaps** and help injury prevention.

Moneyball | *Kotlin, Spring Boot, Jupyter Notebook, React* 2026 – Present

- Simplified complex analytics from the official MLB and Statcast APIs to **describe behaviours** in plain English instead of overwhelming users with numerical **KPIs** they do not understand.
- Originally built as a **Jupyter Notebook** then expanded into a **self-hosted Spring Boot** service.
- Processed **.csv files with 120+ fields with 500+ records** for each game to evaluate at a pitch-by-pitch level.
- A daily **scheduled task** collects season data, aggregating player and team overviews for expected leaderboards and standings.

Education

University of Guelph Guelph, ON
Bachelor of Computing in Computer Science, Minor in Business - 88.2 GPA *2024 – Present*
Society of Computing and Information Science, Guelph Cyber Security Society, Guelph Google Developer Student Club, Guelph Gryphons Event Staff (Mascot), Lettuce Club, Intramurals (Hockey, Squash, Flag Football)
